CARBINE

RESTRICTED SYSTEM

SIGMA | X

Have you ever run out of codes for a traditional restricted system?

DESIGN REGISTRATION PROTECTED UNTIL 2030, WITH LATER PROFILE RELEASES EXTENDING SYSTEM LIFE EVEN FURTHER

MULTI-BROACH SYSTEM

EASY TO MASTER KEY AND MANAGE

LARGE RANGE OF CYLINDERS

STANDARD INLINE SYSTEM, REQUIRES NO ADDITIONAL PARTS OR COMPLEX ASSEMBLY

Sigma X allows you to use the traditional hierarchy of a restricted master key system with the added advantage of over 300 times your normal hierarchy limit. With 1,024 possible combinations, you choose your hierarchy.

The Carbine research and development teams in consultation with leading Australian locksmiths have completely transformed the approach to restricted keying design. The multi-broach system as opposed to typical key profiling expands a simple broach profile into hundreds of broach combinations as well. Simply choose a profile barrel and profile key to suit your desired hierarchy.

Manufactured to absolute precision, the Sigma X key blanks are produced by world leading Keyline keys and are made to 2.9mm thickness at the bottom for improved strength and leading up to 0.9mm at the top, making them easy to be cut on all common key cutting machines such as Keyline or Silca. The ergonomic key head design leaves plenty of room for coining company details and a hole punched in the key head allows for up to 18 colour identification inserts.

The Sigma X barrels are produced to the highest standards by the Carbine cylinder manufacturer, with over 20 years' experience in the manufacture of precision key systems. Using the latest precision CNC machinery and stringent quality control standards, this ensures perfect operation every time.

COMPLETE RANGE OF CYLINDERS

SIGMA | X

Barrels are all manufactured of brass with a satin chrome finish (CPL screen door barrels are only available in chrome plate).

Barrel types are available to suit:

SECURITY

HIGHLY PICK RESISTANT KEY BROACH

Sigma X complex design makes it much more secure and resilient against lock picking attacks.

DESIGN REGISTERED KEYWAY

We restrict the key blanks to authorised dealers, who are legally prohibited from unauthorised duplication. The key design is protected by Australian and New Zealand law.

FLEXIBILITY

COLOURED PLASTIC KEY INSERTS

Coloured key inserts are available as a great visual aid to allow you to easily manage your keys and security options.

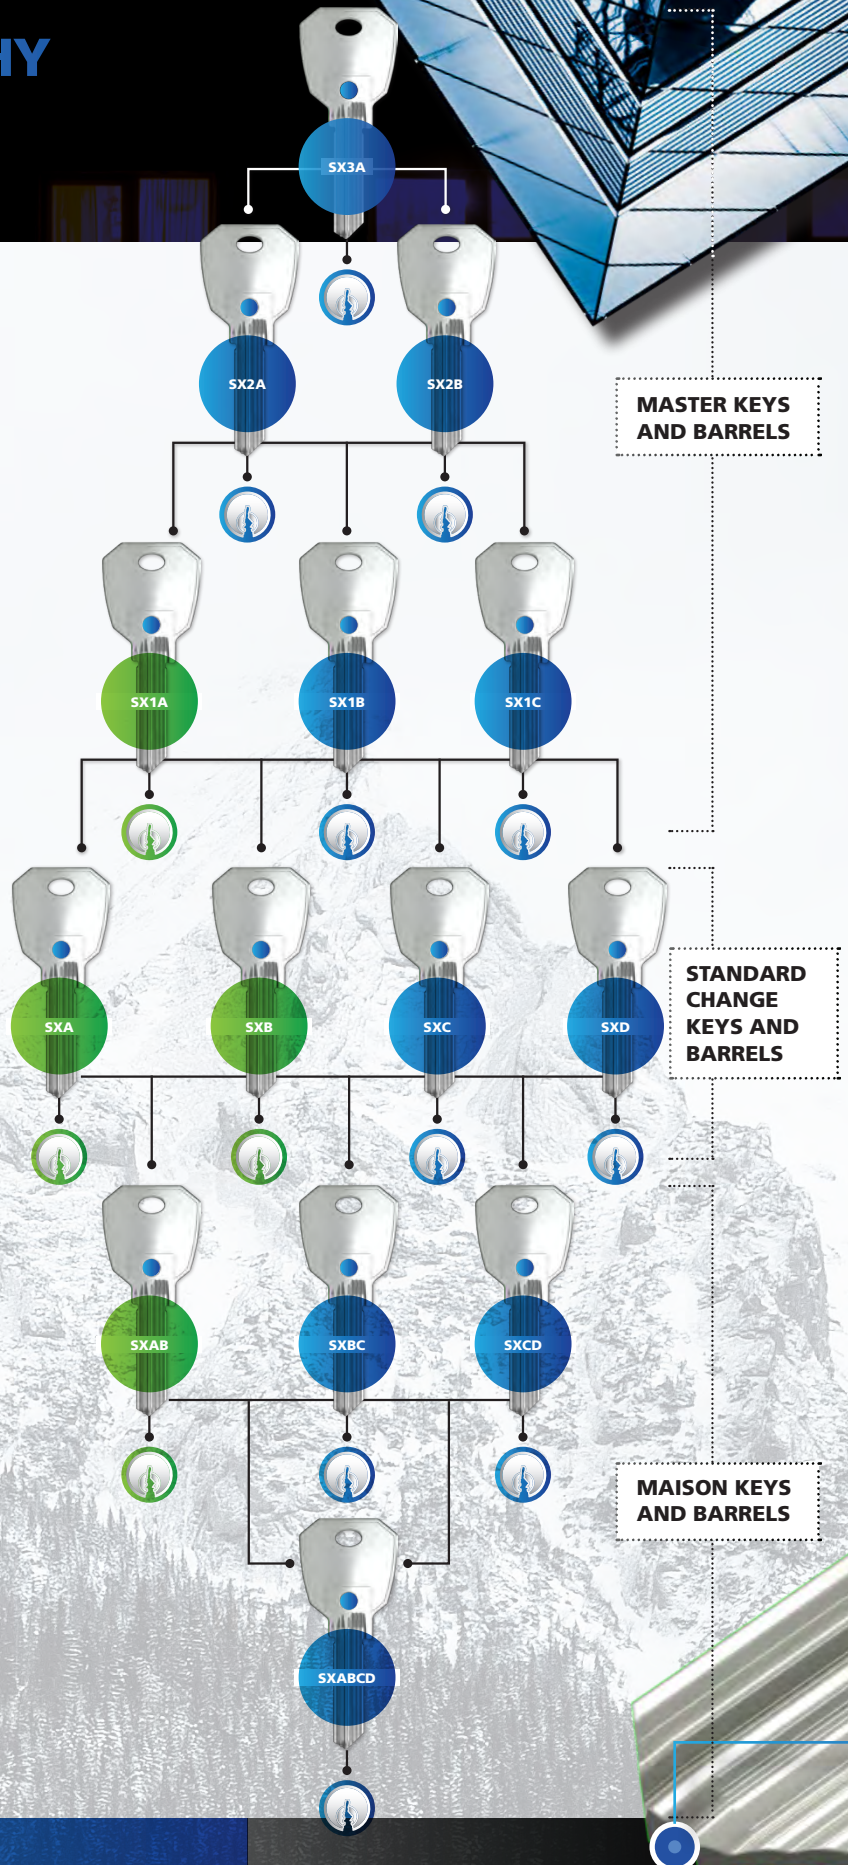

QUALITY

MANUFACTURED TO HIGH PRECISION STANDARDS

All Sigma X components have been designed by Australian industry experts to the highest standards. Sigma X range is manufactured by lock manufacturing professionals with many years of experience.

 First release Mid 2020

 Potential later release with extended design registration coverage

1,024 possible combinations

300 X
your normal hierarchy limit

HIGHLY PROTECTED SYSTEM

SIGMA | X

The design registration on the initial profile release of Carbine Sigma X is valid until 2030 with restricted key blanks available to authorised partners only under a signed agreement to protect the system from potentially unauthorised copying. Further profiles will continue to be released year after year with later design registrations, allowing you to continue extending your systems. In addition, authorised partners are required to store key blanks in a restricted area, verify identity of end users requesting a key cut or copy, keep a record of all sales, and limit sales of Sigma X multi-broach systems to end users only.

INCLUDES A HOLE PUNCHED IN THE KEY HEAD TO SUIT E-PI COLOURED PLASTIC INSERTS
